Practice Problems

7th Aug 2019

Note: Practice problems are not graded. They are just for familiarizing you with FDM

(a) Assume two metal plates A and B are kept at a separation of $100\text{ }\mu\text{m}$ in free space. Plate A is grounded (at $x=0$) and while plate B is held at a potential of 1V (at $x=100\text{ }\mu\text{m}$). Find the potential profile from Plate A to Plate B.

(b) For the same configuration as above, assume both plates are grounded, and a charge sheet of zero thickness but with charge of -10^{-6} C/cm^2 is placed at a distance of $30\text{ }\mu\text{m}$ from plate A towards plate B. Find the potential profile from Plate A to Plate B.

(c) Assuming the conditions in case (a), assume that the region between A and B has a charge density of $q \times 10^{16}\text{ cm}^{-3}$, where q is the electronic charge. Find the potential profile between the plates A and B.
